

PODARTIS
clinically tested footwear

2026
**Fall / Winter
Collection**

**Artfully created.
For you.**

What will I find inside?

Who is Podartis?

Podartis designs biomechanical footwear aimed at improving well-being and the quality of movement. Scientific research, Italian materials, and functional design come together to support every step, every day.

Sandy line

The Sandy line is designed to naturally and progressively adapt to the foot. Self-molding uppers and seamless technologies ensure comfort, protection, and freedom of movement.

Activity line

Designed to support walking and adapted physical activity, the collection is divided into two categories: Urban Activity and Sport Activity, offering stability, cushioning and step control for safer, more natural movement.

Classic line

The men's Classic line combines functional elegance with Podartis expertise. Footwear designed to support daily life with comfort, stability, and durability.

Deambulo line

Essential comfort and targeted support for everyday use. A line designed to offer stability, protection, and easy wearability.

FW 26/27 Collection

The FW 2026/2027 collection addresses today's needs for comfort, stability, and everyday style. Advanced technical solutions and carefully selected materials create a balance between functionality and aesthetics.

Classic line

Essential elegance meets biomechanical comfort in the Classic line. Versatile models, designed for everyday wear without sacrificing style or well-being.

Deambulo line

A line created to offer maximum lightness and long-lasting comfort. Ideal for sensitive feet, with technical solutions that promote stability and well-being.

Sneakers City line

An urban-inspired line designed for movement and well-being. Contemporary design and biomechanical soles to face the city with comfort and control.

Sneakers City line

Urban style and Podartis technology come together in a sneaker with superior comfort. Contemporary design and biomechanical soles support movement in the city.

Activity line

Developed to improve walking and posture, the range is divided into Urban Activity and Sport Activity categories. Advanced biomechanical technologies ensure support, control and safety at every step.

A photograph of a modern, dark-colored building with a sign that reads "Podartis". The building has several arched windows and a central entrance with a large glass door. The sky is a mix of orange, yellow, and blue, suggesting a sunset or sunrise. The foreground shows a paved area and some greenery.

New FW 2026/2027 Collection

Who is Podartis?

Podartis specializes in the production of footwear, insoles, stockings, braces and materials for the prevention and treatment of the main walking pathologies such as hallux valgus, hammer toes, rheumatic foot, diabetic foot and post foot surgery. The company's flagship product, the result of more than 30 years of research, is its cutting-edge solutions for the diabetic foot.

Every product made by the company is rigorously clinically tested to meet the highest quality standards in the sector and guarantee maximum protection and comfort.

Continuous product innovation has its source in a constant commitment to research, linked to medical-scientific comparisons and collaborations with some of the most authoritative international experts.

The patents that characterize Podartis products are direct evidence of the company's mission: to help people walk well to live better.

Key concept

QUALITY AND CHARACTER OF MATERIALS

A cornerstone of the collection is the use of resistant and washable materials exclusively from high-quality Italian manufacturers, connected to the most prestigious world of Made in Italy.

The growing demand from consumers for easily cleanable uppers has led to a rebalancing in slippers as well, reducing models with more delicate fabrics and felts in favor of leather and stretch uppers that are more resistant to domestic stains.

Across all footwear lines, the offering of uppers in leather and flexpell has clearly increased. For the first time, we are also introducing models with water-resistant membrane linings, for more practical use in cases of rain and bad weather.

The resistance and durability of the models are also linked to the important theme of product longevity, a factor increasingly considered by consumers when choosing and purchasing.

NEW IN THE MEN'S LINE

Debuting this season is the new MAGNUS ankle boot, equipped with a rotor lace closure with micro-adjustment and a rigid DCS AFO biomechanical sole. The upper is in nubuck and suede with a water-repellent membrane lining, ensuring perfect use in any environmental condition.

The model is offered in two color variants (black and military green) and two fits (fit 12 and 14).

Also debuting this season is the VICTORY city sneaker, a vegan model with a self-molding stretch vamp.

The TURNER men's line uses a stretch vamp (instead of leather), thus enhancing adaptability and fit in the metatarsal area.

The MARTIN desert boot is offered in two versions of water-resistant suede. The model has also been updated to allow for a wider fit.

ACTIVITY SPORT LINE UPDATES

In the Activity Sport line, the POD-X model has been equipped with a closed, thermoformable nylon upper with a more winter-oriented function compared to previous versions.

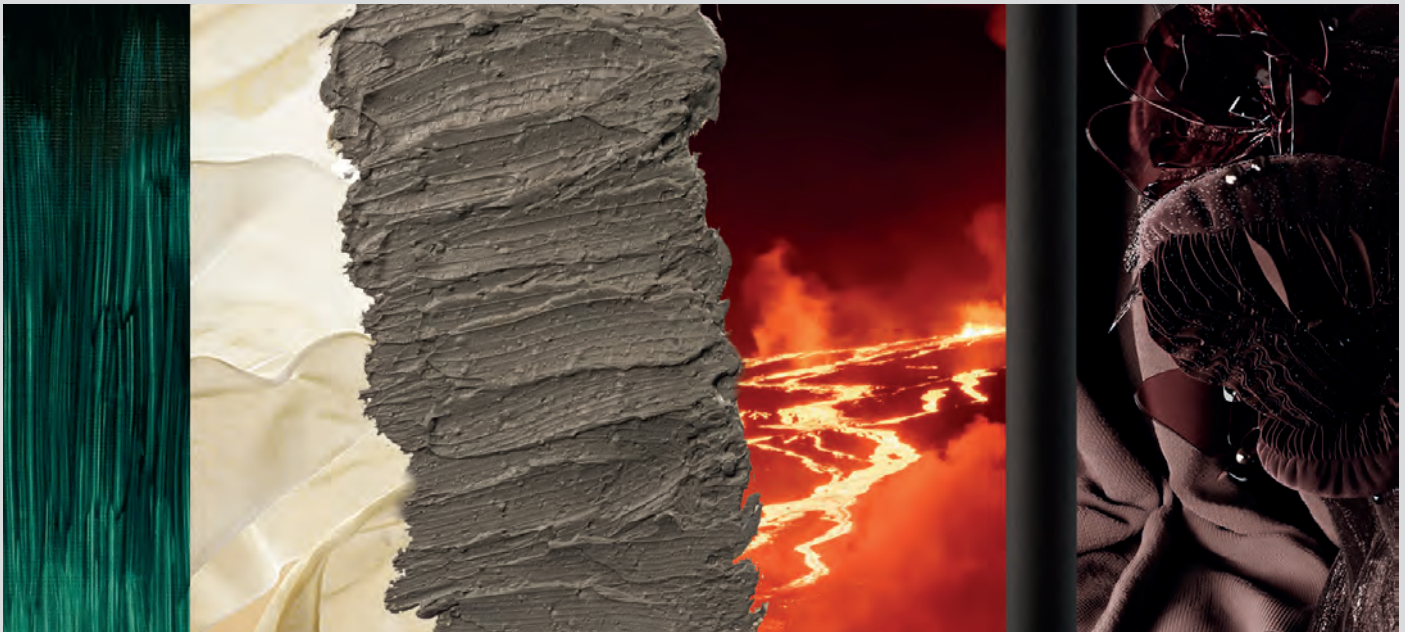

Additionally, the POD-X WR full black version includes a water-resistant membrane lining to offer further guarantees of use in any winter climate.

DEAMBULO LINE UPDATES

The entire Deambulo line for men and women features the new PODfit insole.

This new three-density insole is covered in breathable eco-leather, includes a cushioning insert in the heel, and a large structural insert to support the arch.

This update ensures enhanced comfort and an even more pleasant walking experience for all models: VIA, JANE, DEAMBULO SPORT II, DEAMBULO L.

Colors concept

We undoubtedly live in an era of transition and transformation. Ongoing global events are challenging all our assumptions—social and cultural. In this context of suspension and uncertainty, colors and materials must convey positive emotions, both physical and mental.

Consumers' focus will increasingly turn toward physical well-being with a holistic approach, aiming to achieve overall harmony between body, mind, and spirit.

In this setting, colors are divided into three types:

ETHEREAL – The theme of ethereal, delicate, desaturated colors (core concept of the season).

- Frost Beige: Suspended between creamy yellow and white butter, frost beige is a neutral tone with a relaxing and serene character. This color evokes sensations of inner warmth, of winter sun diluted in a bath of light. A color designed for healing, connecting with nature through sustainable and ancient chromatic practices. This tone also refers to health, guided by the importance of bio-based materials and protein fibers like casein and silk, which inspire this hue.
- Mud Brown: A medium desaturated brown tone that expresses itself best in suede and writable materials. A trans-seasonal unisex color, easy to pair, with remarkable potential.

INFINITE DARKNESS – The darkest colors, the most intimate and introspective space of the palette.

- Bitter Burgundy: Burgundy this season merges with dark brown, creating a deeper tone straddling both colors, elegant and exclusive. Inspired by a sense of nostalgia in the age of AI, this color celebrates art, craftsmanship, and handmade work. A trend color also well-suited for the world of sneakers.
- Dark Bronze: Our feminine interpretation of very dark browns, like espresso brown and peat brown, which are prominent this season. A color of shadows and reflections, graceful and extremely elegant, underlining the ongoing importance of brown and the shift toward neutrality, a key theme in this transitional time.

EMPHASIS – Bold, dissonant colors inserted into this “intimate” space create visual tension, a zone of energy in a world of soft shades.

- Volcano Red: A deep red with bronze highlights that changes tone under the light. Inspired by the shades of volcanic lava, one of nature's most primitive and fascinating expressions.
- Deep Green: An intense green that combines elegance with a mysterious, almost natural depth. This tone serves as an alternative to black, is universally applicable, and supports the current trend toward inclusive design. At the same time, it appeals to consumers seeking strength and distinction in their look.

Podartis vegan

Today, vegan shoes are not just an ethical choice but also a fashion and lifestyle choice for many people of all ages.

With growing awareness of sustainability, more and more consumers are choosing cruelty-free and environmentally respectful products.

According to a recent Environmental Profit & Loss sustainability report by a major global fashion group, vegan leather has only one-third the environmental impact of real leather.

So, is vegan leather good for the environment? The obvious benefit of vegan leather is that it does not rely on livestock, which not only kills animals but also causes deforestation and damages the natural habitats of wild animals.

For Podartis, a key focus of every Vegan item is to guarantee a 100% hypoallergenic product.

In light of all these important factors, the Vegan line is expanding this season across all product segments:

In the Vegan women's F/W 2026 range, there are 4 slippers (**Alipad Eco Black, Alipad Eco Moss Green, Arianna Frost Beige, Janet Batik Moss Green, and Susan Black**), 6 items in the Deambulo line—including 2 **Via** models, 3 **Deambulo Sport**, and 1 **Jane** — and 4 city sneakers from the **Victory** range. The urban activity category features 2 models: **Fancy Eco Dark Blue** and **Ginger Velcro Eco Dark Blue**. In the Activity Sport segment, there are as many as 9 proposals, including **Saturn-X, POD-X, and Zephyr**.

In the Vegan men's F/W 2026 range, the offering includes 2 **Ruben** slippers and 1 **Alan** clog from the Classic line, along with 2 city sneakers from the **Victory** range. The Activity Sport line is strong with 9 models, again including **Saturn-X, POD-X, and Zephyr**. Rounding out the men's selection is 1 model in the Deambulo range, the **Deambulo L**.

Podartis goes green

In a time of great uncertainty and complexity, the choice of sustainable materials takes a central role in the collection.

Using green materials is a necessary ethical commitment toward both consumers and the environment, in response to the ongoing climate changes.

Main sustainability initiatives in the collection:

- We use leathers from LWG GOLD-certified tanneries.

LWG certification is a quality seal for companies in the leather industry, recognizing those that manage environmental impact and sustainable economics with a systems-based approach.

This environmental audit protocol was developed by fashion brands and leather producers, with input from NGOs like WWF and Greenpeace. It is regularly updated to stay relevant to the sector's needs.

- We use raw materials from suppliers powered by 100% green energy.

- We use eco-leathers from companies part of the SEAQUAL INITIATIVE — a global community of people, organizations, and companies working together to clean the oceans, raise awareness of marine litter, and support those fighting it.

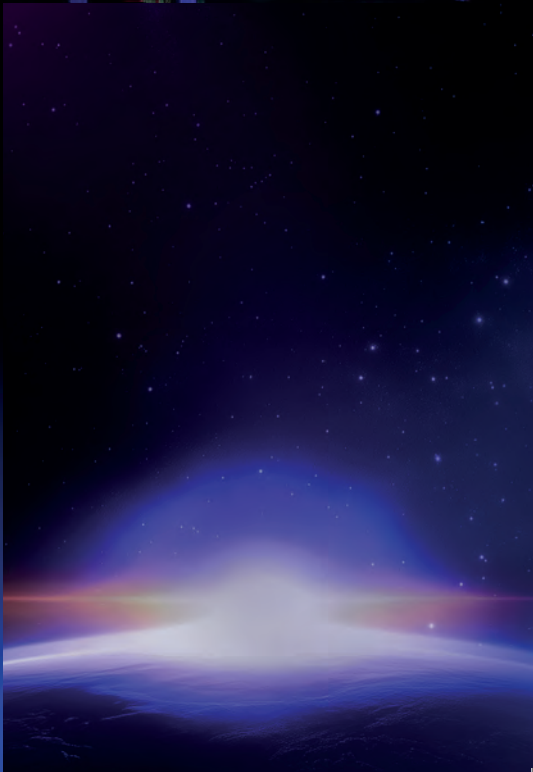

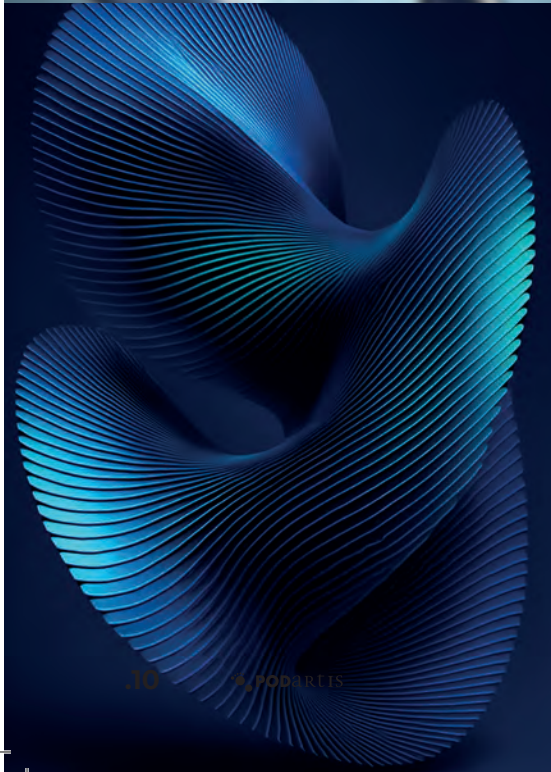

- We buy stretch fabrics from companies registered and awarded under the “Carbon Footprint Registry, Compensation, and CO₂ Absorption Projects” program.

This European initiative led by environmental ministries aims to minimize environmental impact and achieve carbon neutrality in production processes.

All “Fancy” and “Ginger” models in the sample collection (a total of 6 items) are made from stretch fabrics using recycled polyester yarns, certified to GRS (Global Recycled Standard).

By using recycled yarns, the collection promotes the circular economy and significantly reduces greenhouse gas emissions during production cycles.

POD-X • New technical concepts

POD-X shoes are designed to provide **maximum comfort, stability, and performance** while walking.

They represent the pinnacle of technology and design, with an innovative sole that is the result of Podartis research in biomechanics and personal well-being.

Here are some key features that make them ideal for Adapted Physical Activity:

- **Breathable materials:** use fabrics that allow air circulation, keeping feet dry and cool.
- **Advanced cushioning:** equipped with semi-rigid outsole with D-lite insert, provides effective cushioning to absorb impacts and reduce plantar pressures.
- **Stabilizer system:** the special shape of the sole in the rearfoot combined with the lateral Stabilizer system provides outstanding stability and prone-supination control.
- **Optimal grip:** outsoles designed with treads with rubber inserts to provide secure grip on different surfaces, preventing slips and falls.
- **Safety in every step:** the large support surface evenly distributes pressure and increases stability, promoting natural posture.
- **Lightweight:** built with lightweight materials that allow smooth and effortless movements, reducing fatigue.
- **Protection:** D-lite technology provides an elastic response that eases stride. Timing Rocker® outsole complements semi-rigidity control for total protection while walking.

DCS LIGHT • New technical concepts

The DCS Light is a fiberglass insert placed inside the high-density EVA Piuma Podartis sole.

D-light technology provides:

- **Elastic response that facilitates stride**
- **Control of excess pronation and supination**
- **Increased propulsive phase thrust**
- **Controlled semi-rigidity**

The D-light sole is suitable for those who need protection and stability while walking.

PODfit • New technical concepts

The new PODfit insole features a structural shell that supports the medial arch, helping maintain proper foot alignment during walking.

PODfit insole includes:

- **Heel shock absorber to reduce impact stress**
- **Arch support shell for enhanced stability**
- **Cover for breathability and daily use**
- **Soft compound layer for cushioning and comfort**

The PODfit insole is suitable for those seeking improved comfort, support and shock absorption during everyday activities.

**Protection and
stability.
Always.**

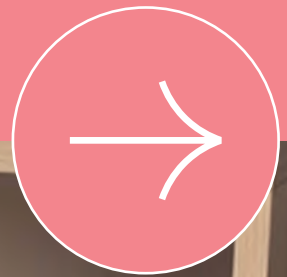

Women's Collection

The Podartis Fall/Winter 2025 women's collection is born from the blend of well-being, style, and attention to detail.

Embracing shapes, high-quality Italian materials, and biomechanical solutions come together in a feminine and contemporary aesthetic.

Each model is designed to support everyday life with comfort, protection, and lightness.

Crafted with care, for you.

- 16. SANDY line
- 28. CLASSIC line
- 30. SNEAKERS CITY line
- 34. ACTIVITY line
- 40. DEAMBULO line

Sandy line

The Sandy line aims for maximum functionality, adapting to the foot of each patient.

Podartis **Seamless Technology** reduces the presence of noticeable seams within the product to avoid painful chafing and ensure maximum protection. All inner linings feature high-density materials for better comfort and feature, in the layer in contact with the foot, Lycra® Dermocompatible.

Width 10,5

The new Sandy Evo Biomechanical Outsole protects the joints of the foot better more during the gait phases and ensures a performant redistribution of pressures. The 20mm physiological heel ensures the correct posture of the patient.

Biomechanical outsole flexible

The high-density Eva + PU compound of the Sandy footbed provides continuous step cushioning and effective protection especially to rheumatic patients.

Dermocompatible microfiber cover.

The 10.5 fitting combined with the products' self-fit ensures an excellent fit for even the most demanding feet.

Outsole features

- Biomechanical rocker / Protects joints
- 20 mm heel / correct posture
- Non-slip inserts in the tread

Classic line

The interpretation we developed for the Classic segment follows the theme of basic and classic colors.

In line with post-pandemic market trends, we propose a wide range of black variants modulated through various materials (tassels, semi-gloss calfskins, glossy patent leather) and a return of variants in brown and dark brown tones.

Width 10,5

The new biomechanical Dana polyurethane sole has two rubber lugs in the tread with non-slip textures.

Biomechanical outsole flexible

This solution combines light weight with increased grip in the winter months on all surfaces, bringing improvements in both style and performance over the previous Deva sole.

Outsole features

- Shock-absorbing islands / High wear resistance
- 25mm heel / better posture

Sneakers City line

Born from the need to introduce a contemporary City Chic style aligned with current trends, Podartis developed the Sneakers City line.

The line features a biomechanical outsole made of Italian EVA, designed to deliver extreme comfort, reduce joint stress and redistribute pressure peaks, ensuring a natural and stable walking experience in everyday urban life.

Width

11-11,5

The new Softy sole, made of Italian-made EVA foam, is a biomechanical sole with extreme comfort, designed to reduce joint stress and rebalance pressure peaks.

Biomechanical outsole semi-rigid

The compound technology is designed to ensure lightness, softness and elasticity, but also abrasion and tear resistance, and good grip on dry and wet surfaces.

Outsole features

- 60% Semi-rigid / super-lightweight bi-density PU
- 70% Semi-rigid / microporous Eva

Deambulo line

Classic, elegant and lightweight line, a best seller in stores, prized for its extreme comfort.

The sole is biomechanical to reduce stress joints and rebalance pressure peaks.

Width 12

Fitting 12 makes them particularly suitable for feet that need even custom-made insoles of considerable thickness.

Biomechanical outsole flexible

The Flexpell has a sandwich structure with an outer layer that is waterproof, a self-molding open-cell middle layer that ensures microcirculation of air, and an inner layer made of Dermocompatible Lycra.

All models are self-molding and the linings are made with seamless technology to contain slight deformities and snug fingers.

The Classic Line for Men has always been one of Podartis' cornerstones to offer an elegant product for the business man combining technicality and functionality of the products.

Width

11-11,5-12

Biomechanical outsole flexible - semi-rigid

The Timing Rocker® Podartis micromachined outsole is 70% semi-rigid and reduces the energy demand for stride, ensuring a smooth transition between the moment of contact and propulsion.

Ideal for juniors - seniors over 55, with reduced joint mobility and progressive bone decalcification. Particularly suitable for patients with diabetes or rheumatics in risk grade 2. To increase the performance of efficacy and protection, the use of treads among the best performing in terms of abrasion resistance and cushioning developed **in collaboration with Vibram**.

Podartis Seamless technology reduces the presence of visible seams inside the product to avoid painful chafing and ensure maximum protection. All inner linings feature high density for added comfort.

The choice of socks also accommodates feet with deformities major deformities, fully responding to all degrees of risk provided by the **International Diabetic and Rheumatic Triage**.

Outsole features

- Timing rocker / biomechanical outsole with micro
- Support structure / density 330kg / m³

Sneakers City line

Born from the need to introduce a contemporary City Chic style aligned with current trends, Podartis developed the Sneakers City line.

The line features a biomechanical outsole made of Italian EVA, designed to deliver extreme comfort, reduce joint stress and redistribute pressure peaks, ensuring a natural and stable walking experience in everyday urban life.

Width 11

The new Softy sole, made of Italian-made EVA foam, is a biomechanical sole with extreme comfort, designed to reduce joint stress and rebalance pressure peaks.

Biomechanical outsole semi-rigid

The compound technology is designed to ensure lightness, softness and elasticity, but also abrasion and tear resistance, and good grip on dry and wet surfaces.

Outsole features

- 60% Semi-rigid / super-lightweight bi-density PU
- 70% Semi-rigid / microporous Eva

Activity line

For a decade, Podartis has been promoting movement and adapted physical activity. **Clinical studies have shown that the shoes Activity significantly improve the parameters of gait and posture.**

Key features: Seamless upper, stabilizing and extended spurs, various fits, semi-rigid biomechanical outsole.

Deambulo line

Classic, elegant and lightweight line, a best seller in stores, appreciated for its extreme comfort.

The sole is biomechanical to reduce joint stress and rebalance peak pressure.

Width 12

The 12-gauge fit makes them particularly suitable for feet that also require custom-made insoles of considerable thickness.

Biomechanical outsole flexible

Flexpell® has a sandwich structure with an outer layer that is waterproof, a self-molding open-cell middle layer that ensures microcirculation of air, and an inner layer made of Lycra dermocompatible.

All models are self-molding and the linings are made with seamless technology to contain slight deformities and snug fingers.

Outsole features

- Flexible timing rocker® / non-slip pads
- PU tread with high resistance to abrasion
